

VisionClaw

Agentic AI Corporation Platform

AI Buddy LLC (Illinois) | April 2026
Multi-Tenant | 14 Personas | 97 Tools | 36+ Models | 40 Governance Rules

Platform Statistics

- 146 server-side TypeScript files (~66,000 lines)
- 38 frontend pages + 110 client TypeScript/TSX files
- 67 database tables with pgvector extension
- 97 built-in AI tools + custom tool support
- 23 active skills (8 business + 15 platform)
- 14 AI personas (autonomous corporate team)
- 36+ models across 8+ providers (OAuth-first smart routing)
- 40 governance rules (NIST, OWASP, Singapore IMDA)
- 11 research programs (5 nightly + 6 business)
- 13 heartbeat tasks | 7 research schedules
- 6 Claude Code-inspired features (all complete)

The 14 AI Personas

VisionClaw: Personal AI Assistant — handles any task, remembers everything

Felix: CEO & Orchestrator — decomposes requests into DAG execution plans

Forge: CTO & Staff Engineer — code, integrations, architecture review

Teagan: CMO & Content Marketing — campaigns, AI images, social media

Blueprint: VP Engineering — system architecture, engineering workflows

Chief of Staff: Operations Director — workflow optimization, workload balancing

Scribe: Content Director — blogs, newsletters, docs, reports, presentations

Proof: QA Director — auto-reviews every deliverable, 10-point quality scoring

Radar: Intelligence Analyst — competitive monitoring, market scanning

Neptune: Wellness Specialist — health guidance, companion messaging, research

Apollo: Strategy & Revenue — business strategy, pricing analysis

Atlas: Finance & Analytics — KPI dashboards, trend analysis

Cassandra: Risk & Forecasting — risk assessment, financial modeling

Luna: Legal & Compliance — contracts, regulatory compliance, governance

97 Enterprise AI Tools

Categories: Communication, Research, Documents, Code Execution, Virtual Browsing, Web Scraping, Agentic Operations, Google Workspace, System Management, Finance, Media, Diagrams, Presentations, Social Media, Analytics

Key tools: generate_dashboard, strategic_interview, export_persona, render_diagram, vibevoice_transcribe, create_slides, trend_research, finance market tools (OHLCV, news, search, overview)

36+ AI Models with Smart Routing

- Providers: OpenAI, Anthropic, Google Gemini, xAI, Perplexity, Cohere, OpenRouter
- Tiers: Fast, Balanced, Powerful, Reasoning
- OAuth-First Priority: Free !' Cheap !' Paid
- BYOS: ChatGPT Plus, Google Gemini subscription routing
- Task Complexity Classifier, Multimodal-Aware Routing, Auto-Thinking Mode

Autonomous Operations

- Heartbeat Engine: 13 tasks, 100% uptime over 7 days
- CEO Orchestrator: DAG execution plans with 5 delegation depth levels
- Live Delegation Feed: Real-time animated activity with cost tracking
- Human-in-the-Loop Safety: 40 governance rules, trust scores, earned autonomy

Nightly Autoresearch System

Inspired by Andrej Karpathy's autoresearch concept.

- 11 programs: 5 nightly platform + 6 weekly business
- Each session runs 5-15 experiments using keep/discard loop
- Findings scoring 6+ auto-inject into knowledge base with vector embeddings
- High-score findings (8+) generate code proposals
- Self-healing backpressure handles DB load automatically
- Stats: 352 experiments, 92 findings kept, 114 knowledge entries

Memory & Intelligence

- Three-Tier Semantic Memory: episodic, semantic, procedural
- DreamTask Consolidation: background "sleep" engine every 6 hours
- Instinct Learning: patterns extracted from successful tasks
- LLM-Judged Relevance: GPT-4.1 Mini real-time knowledge scoring
- Cross-Persona Knowledge: vector search across all domains

Security & Governance

- 40 rules based on NIST, OWASP, Singapore IMDA (7 categories)
- Trust Score System: 9 categories per agent, earned autonomy
- Multi-Tenant Isolation: Admin PIN (HMAC-SHA256), timing-safe crypto
- Auto-QA Pipeline: every deliverable scored by Proof
- Emergency Kill Switch

Claude Code-Inspired Features (All Complete)

- Task #2: DreamTask Memory Consolidation
- Task #3: Auto-QA Pipeline
- Task #4: Live Delegation Feed
- Task #5: Skillify Engine
- Task #6: Nightly Autoresearch
- Task #7: LLM-Judged Memory Relevance

Tech Stack

- Frontend: React 18, Vite, shadcn/ui, TailwindCSS, Wouter, TanStack Query v5
- Backend: Express.js, TypeScript, Drizzle ORM, Zod, Helmet

- Database: PostgreSQL with pgvector extension
- AI: OpenAI, Anthropic, Google Gemini, xAI, Perplexity, ElevenLabs
- Integrations: Google Drive, Stripe, AgentMail, WhatsApp, YouTube
